Medical Imaging in Canada 2022-2023

Summary for Newfoundland and Labrador

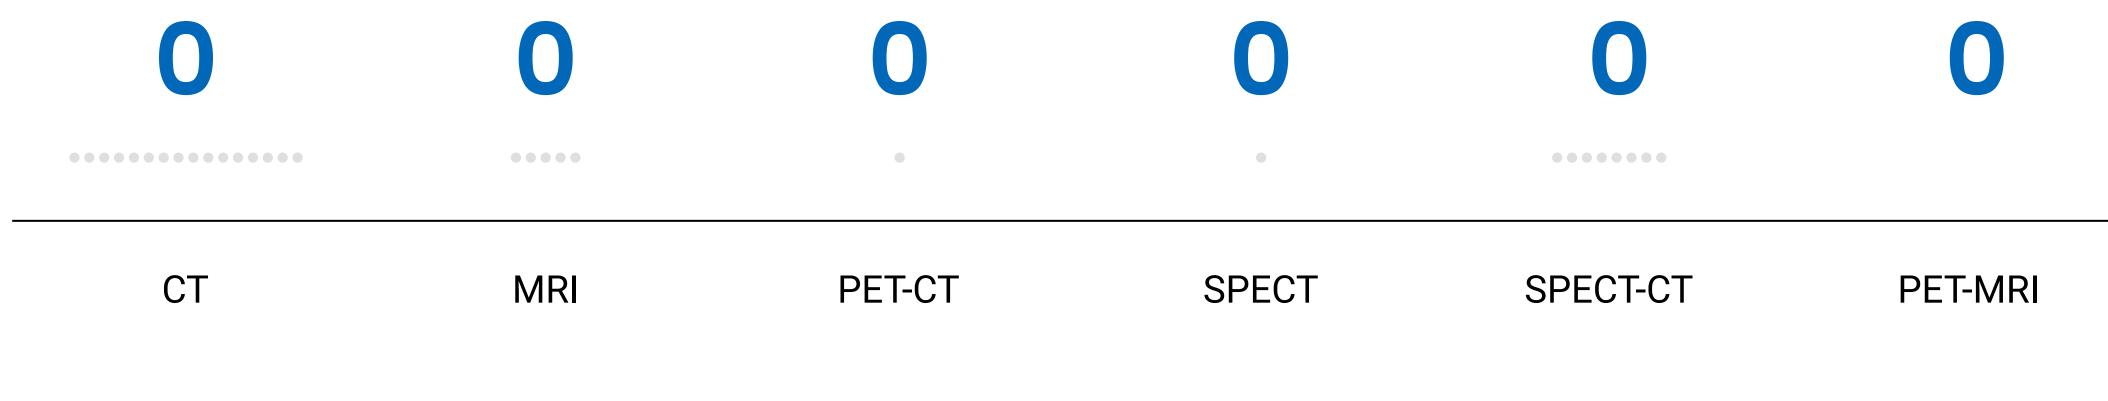

The Canadian Medical Imaging Inventory (CMII) collects data on advanced medical imaging equipment across Canada to help support health care decision-making. The results of the national imaging survey are published in a comprehensive Provincial and Territorial Overview report, and as part of a series of reports that include CT, MRI, PET-CT, PET-MRI, SPECT, and SPECT-CT. This provincial summary consolidates the Newfoundland and Labrador data from these reports. If you are a customer and require additional imaging equipment information, or are interested in participating in future surveys, contact cmii@cda-amc.ca.

Data Limitations

Technical information, including the age of machines, was incomplete for some

sites. If the age of equipment was not available, it was excluded from the

PET-CT

MRI

calculation of averages. Similarly, for some survey questions, a low number of responses were received by participating sites, warranting caution when interpreting the data. Examination data supplied by jurisdictional validators in the last fiscal or calendar year were preferentially used over survey data, as not all sites reported examination data. Additional details on the methodology used for the collection of these data are

For the 2022–2023 national survey, a series of reports have been published that include national and jurisdiction-level information on advanced medical imaging modalities and resources: Canadian Medical Imaging Inventory 2022–2023: CT Canadian Medical Imaging Inventory 2022–2023: MRI

Canadian Medical Imaging Inventory 2022–2023: PET-CT and PET-MRI

available in the 2022-2023 CMII Methods document located on the CMII webpage.
